

Alyani Noor Septalia

📍 Samarinda • ✉ septaliaans@gmail.com • 💻 alyanins.github.io • 🌐 AlyaniNS

Summary

Recent Data Analyst graduate with proven ability to deliver end-to-end analytics projects, from data cleaning and transformation to dashboard development and stakeholder communication. Experienced in Python, SQL, Power BI, and Tableau. Seeking Data Analyst, BI Analyst, or Management Trainee roles where data-driven insights support better business decisions.

Core Competencies

Tools & Languages: Python | SQL | Power BI | Tableau | Excel | Jupyter Notebook

Data Skills: Data Cleaning & Transformation (Data Wrangling) | Exploratory Data Analysis (EDA) | Statistical Analysis | Dashboard Building | Business Insight Communication

Advanced: Feature Engineering | Basic Machine Learning (classification, random forests) | Model Evaluation | Data Visualization | Cross-functional Collaboration

Education

Universitas Mulawarman

Samarinda, Indonesia

Bachelor in Informatics (Computer Science equivalent)

Aug 2020 – Apr 2026

- GPA: 3.78/4.00
- Thesis: Resin Identification Code on Plastic Packaging using Few-Shot Learning
- Activities & Achievement: International Student Buddy (VP), Data Science Study Club, Kampus Merdeka programs; 2nd Place – Samarinda Hackathon 4.0 x HACK4ID

Experience

Full Stack Developer

Samarinda, Indonesia

PT. Duta Meta Graha

May 2025 – Feb 2026

- Built an e-commerce app using Flutter with a Laravel backend and shipped it to Google Play Store and Apple App Store with stable post-launch performance.
- Managed internal management systems and optimized database queries to support accurate operational data logging and real-time dashboard reporting.
- Automated data flows in shipping documentation for a mining client, reducing manual data entry by 50% and improving data accuracy.

Information Technology Staff (Maternity Leave Replacement)

Samarinda, Indonesia

Office of International Affairs, Universitas Mulawarman

Aug 2023 – Feb 2026

- Automated online forms and visa workflows using spreadsheet-based tools, streamlining administrative processes for 50+ international scholars and staff.
- Managed participant and scholar databases and coordinated data handover between academic departments, international partners, and government agencies.
- Maintained program documentation and activity records for institutional reporting, ensuring data accuracy across multiple digital platforms.

Information Technology Intern

Samarinda, Indonesia

Office of International Affairs, Universitas Mulawarman

Feb 2023 – May 2023

- Redesigned the International Office website, improving content structure and user experience for prospective international students.
- Supported digital documentation and reporting for international academic programs and institutional records.

Projects

British Airways Booking Completion Predictor

An independent virtual project completed through The Forage - British Airways Data Science Simulation.

- Engineered features from 50k bookings and trained a Random Forest model (CV AUC 0.77) that revealed mobile completion 10.8% vs. web 15.5% (4.7-pt gap), long-lead bookings 13.8% vs. last-minute 17.3%, and 3+ add-ons 18.6% vs. 10.7%, leading to recommendations for mobile funnel fixes (+420 completions per 10k sessions), urgency nudges (+2–3k completions), and earlier add-on prompts (+3.5k completions).

Global Plastic Waste Analytics

Independent end-to-end global plastic waste analytics project.

- Harmonized Kaggle 2023 and OWID 2019–2024 datasets for 212 countries into a Power BI dashboard showing China/USA/India produce over 50% of global waste, Comoros leads per-capita mismanaged waste, Asia accounts for 33% of mismanaged waste, and production grew from 2M to 313M tons (1950–2010), informing high-per-capita country interventions and recycling investment in Asia.

Online Retail Analytics (Business Simulation)

An independent virtual project completed through The Forage – Tata Group Data Visualization.

- Transformed 541k raw UK retail transactions (2011) into 397k cleaned rows using Python EDA and built a Tableau dashboard that showed the top 10% repeat customers generate ~25% of revenue (3x higher in Nov/Dec), Netherlands/Ireland/Germany lead non-UK revenue, and home decor dominates sales, supporting loyalty programs and Western Europe expansion.

Loan Prediction: Customer Risk Analytics

Final project of the Rakamin Data Science Bootcamp (team-based).

- Applied the 5C credit framework to 252k customer records (SMOTE balanced to 442k) and trained a Random Forest model (F1 0.57) showing low-income customers default at 15% vs. high-income 12%, single customers at 12.5%, millennials at 13.4%, and suburban residents at 16%, enabling workforce reduction from 6 to 3 analysts plus a Data Scientist and monthly cost savings from Rp27.5M to Rp20.5M.

Certifications & Professional Credentials

Microsoft Certified: Power BI Data Analyst Associate
